

Final Project Submission Guidelines and Deliverables

You have completed a series of labs applying key **data analysis concepts using Python** through hands-on practice in **Jupyter Notebooks**. Each lab guided you through essential tasks such as importing data, performing data wrangling, conducting exploratory data analysis, and building predictive models.

The final assignment brings together all the skills you have developed. In this exercise, you will apply them by **analyzing real-world data, developing models, and evaluating their performance using Python**.

How can you submit the deliverables

You can submit your project deliverables in one of the following ways:

- **AI Graded - Final Project Submission and Evaluation**
- You are tasked with summarizing and interpreting the results of a real estate price prediction model created using Python. You'll analyze key aspects of data analysis—data understanding, visualization, modeling, and evaluation to demonstrate complete comprehension of the end-to-end workflow.
